Zeyad Magdy Ashour

Junior DevOps & Cloud Engineer

+20 1098304466 | zeyadashour2004@gmail.com | github.com/Zeyad200445 | linkedin.com/in/zeyad-ashour-755

SUMMARY

A passionate Communications Engineering student with a solid foundation in networking and Linux administration. Hands-on experience deploying applications on **Kubernetes** with **Helm**, building CI/CD and Git-driven (GitOps-style) pipelines, and automating AWS infrastructure with Terraform and Ansible. Eager to apply academic knowledge and technical skills in a DevOps role.

TECHNICAL SKILLS

- **Cloud:** AWS (EC2, VPC, S3, IAM, ECS, EKS, ECR, RDS), Microsoft Azure, DigitalOcean
- **Containers/Orch.:** Docker, Docker Compose, Kubernetes (K8s), kubeadm, Helm
- **CI/CD & GitOps:** Jenkins, GitHub Actions, GitLab, Maven, SonarQube, GitOps workflows
- **IaC & Config:** Terraform, Ansible
- **Languages/Scripting:** Python, Bash, C++
- **Databases, Storage & Messaging:** PostgreSQL, MySQL, Redis, Memcached, RabbitMQ, MinIO (S3 API)
- **Networking & OS:** Linux Core Administration, TCP/IP, Calico CNI, Nginx, Tomcat, Firewall Configuration
- **Tools & Monitoring:** Git/GitHub, Netcat, Prometheus, Grafana

PROJECTS

vprofile – Java Microservices Deployment & Automation *Kubernetes, Helm, Terraform & Ansible*

- **One-command Deployments:** Packaged a multi-tier microservices application (Nginx, Tomcat, RabbitMQ, MySQL, Memcached) to deploy on AWS with a single command, in three independent strategies. github.com/Zeyad200445/vprofile-project-quickly-steup
- **Kubernetes & Helm:** Provisioned an EKS cluster with Terraform and deployed the application (Deployments, Services, Ingress, Secrets, PVCs) as Helm charts, injecting Terraform outputs into values.yaml.
- **GitOps-style Pipelines:** Linked Terraform, Helm and application repos through pipelines (plan, apply, drift detection, Helm lint/deploy, Slack alerts); CI updates the Helm image tag to trigger deployment.
- **Terraform & Ansible:** Provisioned AWS (VPC, subnets, security groups) with Terraform and S3 remote state; automated multi-AZ VPC, bastion host and service setup with Ansible playbooks.
- **CI & Monitoring:** Jenkins pipelines (Maven, SonarQube, Docker, ECR); Prometheus and Grafana alerts.

NestFlux – Cloud-Native Full-Stack Deployment Platform *Kubernetes, Terraform & Ansible*

- **Infrastructure as Code:** Architected and provisioned a segmented cloud network (VPC, public/private subnets, security groups, ECR, EKS, RDS) using Terraform, validating the design against LocalStack prior to live deployment.
- **Kubernetes Deployment:** Provisioned and managed a production Kubernetes cluster (DigitalOcean DOKS) with a managed PostgreSQL database, enforcing service-to-service traffic isolation via security groups and Kubernetes NetworkPolicies.
- **Configuration Automation:** Automated the full post-provisioning setup (namespaces, secrets, ingress rules, application rollout) using structured, reusable Ansible roles across networking and application tiers.
- **CI/CD Engineering:** Built GitHub Actions pipelines to automatically build multi-stage Docker images and publish them to GHCR on every code change, with environment-specific build configurations.
- **Authentication & Authorization:** Integrated production-grade OIDC authentication (Auth0) with social login and audience-scoped JWT access tokens validated on the backend.

CERTIFICATIONS

DevOps Projects | Real Time DevOps & GitOps Projects – Udemy | Credential: ude.my/UC-6e8f44e9-1176-4980-94d3-fd5ef7fc03b0

EDUCATION

B.Sc. in Electrical & Telecommunication Engineering — 4th Year (in progress)
Egyptian Academy for Engineering and Advanced Technology (EAEAT), Cairo, Egypt

LANGUAGES

Arabic (Native) | English (Intermediate)
